PROFILE

Full Stack Engineer

Focused on building scalable full-stack and cloud-native applications with expertise in UX-aware development, backend systems, DevOps, and deployment workflows.

Passionate about transforming ideas from design to production through modern engineering, system design, and product-driven architecture.

EDUCATION

B.Tech — CSE

MIT ADT University, Pune
2024 – 2027

Diploma — CSE

Lovely Professional University
2022 – 2024

ACHIEVEMENTS

- **Smart India Hackathon 2025** — National Winner (BeejSamapadha)
- **MIT-ADT AI Grand Challenge 2026** — Winner (CreditShield)
- **Innotex Competition** — Runner-Up (Economic impact of global war data visualization)
- **Innotek LPU 3rd rank 2024-** (IOT – Deployable speedbreaker using Arduino)
- **GitHub contribution-** 800+ git contribution with 30+ projects

CERTIFICATIONS

- IBM — Docker, Kubernetes & OpenShift
- AWS Academy — Cloud Foundations
- IBM — Relational Databases (RDBMS)
- Coursera — Data Structures
- Coursera — Computer Networking
- Udemy — DSA using C and C++
- Udemy — HTML, CSS & JavaScript

TECHNICAL SKILLS

Languages: Java, Python, JavaScript

DSA & CS: Arrays, Trees, Graphs, DP, Recursion, Hashing, Linklist, | OOP, OS, DBMS, Networking

Frontend: React, Tailwind, Bootstrap, Flutter

UX & Product: Usability Testing, Wireframing, User Research, Responsive Design, Design Systems, Accessibility

Backend: Spring Boot, Node.js, FastAPI, REST APIs, JWT, Redis, API Gateway

System Design: HLD/LLD, Microservices, Sharding, Distributed System, Tenant database

Databases: MySQL, PostgreSQL, Firebase Firestore

Cloud & DevOps: AWS (Lambda, S3, ECS, EC2, IAM, Secret Manager, EKS, SNS), Docker, Kubernetes, Terraform, GitHub Actions, Argo CD

Monitoring: Prometheus, Grafana, CloudWatch

Tools: Figma, Selenium, Postman, Git, Power BI

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern | MIT ADT University

Jun 2025 – Aug 2025

- Architected a **PBL Management System** on AWS Lambda serving **5,000+ students** and 300+ faculty — document submissions, evaluations, and project tracking.
- Built **CI/CD pipelines** with GitHub Actions for automated build, test, and zero-downtime deployments.
- Integrated **Amazon S3** with versioning and access control for document storage across academic cohorts.
- Implemented **REST APIs with RBAC** (JWT auth), enforcing data isolation between student and faculty portals.

Developer Project Intern | Foodibles India LLP

Oct 2023 – Apr 2024

- Built a **Flutter mobile app** with reusable widget libraries, accelerating cross-team feature delivery.
- Designed **Firebase Firestore** NoSQL schema for real-time menu, order, and user management.
- Integrated **Firebase Auth, Storage, and Cloud Functions** for onboarding, push notifications, and order lifecycle.
- Resolved production bugs, profiled performance, and shipped iterative improvements in an Agile environment.

MAJOR PROJECTS

CreditShield AI Grand Challenge 2025 Winner

AI-Driven Loan Appraisal & Risk Intelligence Platform

- Built a **full-stack LOS/LMS** with AI appraisal engine covering salaried, self-employed, and business borrowers — each modeled with distinct risk profiles.
- Designed a **rule engine processing 200+ business rules** across loan types, producing explainable risk flags so credit officers could understand and act on every decision.
- Trained a **default risk ML model** on engineered transaction features (income volatility, EMI-to-income ratio); built synthetic dataset from real SBI bank statement distributions.
- Containerized microservices with **Docker + PostgreSQL**, architected for horizontal scaling as loan volume grows.

BeejSamapadha Smart India Hackathon 2025 Winner

Agricultural Supply Chain Intelligence Platform

- Built a supply chain platform with a **blockchain traceability layer** ensuring tamper-proof records across farmers, distributors, and retailers.
- Integrated **AI/ML demand forecasting** from historical patterns to guide crop planning and reduce oversupply losses.
- Developed a **Flutter mobile app** with role-specific dashboards — crop listings for farmers, procurement trends for buyers, district analytics for policy makers.
- Built a **soil sensor AI model** (moisture, pH, N/P/K, temperature, humidity) to forecast yield, generate harvest schedules, and recommend fertilization plans.
- **Led the team** through planning, development, and national-level evaluation — coordinating across technical strengths under tight deadlines.

VOLUNTEER AND LEADERSHIP

- UNYC Ipu design team member
- Anicos Ipu core team member and design lead
- SIH 2025 winning team IdeaBliss leader
- Ai Grand Challenge 2026 winning team IdeaBliss Leader

Economic Impact of Global Wars on Financial Markets **Innotex Competition — Runner-Up**

Data Analysis & Visualization Project

- Analyzed how major conflicts affect **GDP, inflation, commodity prices, and stock market volatility** — comparing economic behavior across war vs. non-war periods spanning multiple countries and decades.
- Unified datasets from **World Bank, Yahoo Finance, UCDP, and FRED**; performed data cleaning and preprocessing in **R** before any analysis.
- Built interactive **Power BI dashboards** for KPI tracking and **R/ggplot2** visualizations for statistical exploration — presented findings as a structured narrative accessible to non-finance audiences.

DepClick

Cloud Application Deployment Platform | Personal Project

- Self-service platform converting apps into serverless/microservices on **AWS ECS, Lambda, S3** via **Boto3 SDK** — reproducible across dev, staging, and production — with **CloudWatch** monitoring, rollback, and automated failure alerts.
